DETAILED ACTION

- **Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Bush et al, U.S. Patent Number 5,828,583.**

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Bush et al, U.S. Patent Number 5,828,583.

3. Regarding claim 1:

- a. Regarding the limitation of “determining an error rate of a semiconductor memory device implementing detection and correction of an error existing in a plurality of pieces of data stored in said semiconductor memory device by using said pieces of data and inspection bits provided for said pieces of data,” Bush discloses a system that determines an error rate of attributes in a disk drive.

With (Lines 10-20 of Column 37).

- b. Regarding the limitation of “cumulatively adding a first value to a total in the event of a detected first detection signal indicating non-existence of an error in said pieces of data,” Bush discloses a system that has a threshold attribute value that is stored. (Lines 40-45 of Column 37)

- c. Regarding the limitation of “subtracting a second value greater than said first value from said total in the event of a detected second detection signal indicating existence of an error in said pieces of data,” Bush discloses a system

that will monitor performance of a memory and update a count value of the attribute being monitored upon detection of an error. (Lines 28-37 of Column 45).

d. Regarding the limitation of "determining said error rate on the basis of a value of said total," Bush discloses a system that determines an error threshold rate based on an attribute value crossing a threshold value. This equates to a subtraction of values. (Lines 65-67 of Column 46 and Lines 1-3 of Column 47).

4. Regarding claim 2, Bush discloses a system that reads error data from memory. (Lines 55-65 of Column 39).

Specification

5. The abstract of the disclosure is objected to because it is more than 250 words. Correction is required. See MPEP § 608.01(b).

6. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
